

# Streamline Patient Data Exchange Across the Nation

NextGen® Share

## Make a difference in both times of crisis and calm

Sharing and locating records manually is burdensome. You may not even get a complete picture of a patient's health, especially when time is of the essence. Scalable, integrated, and intelligent information exchange at the point of care can make a difference in both times of calm and crisis.

NextGen Share plugs you into a national data exchange and provider network to see a holistic view of the patient. Streamlined patient information exchange enables you to integrate and move data across systems and locations. This capability can help make a difference in COVID-19 vaccine administration, local epidemiology and community surveillance, test results collection, and population-level metrics.

## Connect with millions of providers

Connect with more than 2.1 million caregivers on an open, vendor-agnostic platform that features the largest provider directory in the United States.

## Carequality

The Carequality connection supports health information exchange across the nation and can be integrated within your clinical workflow. You can quickly and securely exchange data without leaving your EHR.

Improve resource allocation,  
enable efficient care management,  
and maximize reimbursement.

## Benefits

### Access clinical records

Reduce burdens associated with manual medical record request processing with NextGen® Share eChart Extraction Service, which automates data retrieval for payer and life insurance partners—all within your workflow.

### View patient records in real-time

Gain real-time access to millions of patient records across billions of encounters with Carequality.

### Perform electronic referrals

Join the community of clients who have sent and received hundreds of millions of Direct messages through NextGen Share. These electronic referrals, built into the workflow, optimize referral management and eliminate the need to send faxes.

### Conduct automated submissions to clinical registries

Meet the Public Health Reporting measure for MIPS and Medicaid while promoting interoperability and specialty registries through NextGen Share.

## Solution Snapshot

- Access and exchange data across the nation with Carequality
- Send and receive referrals via Direct messaging
- Automate data retrieval for payer and life insurance

“One of the great things about Direct messaging and NextGen Share is that it does not matter who the hospital or medical group is, what operating system they’re using, or what EHR or EMR they’re using—Direct messaging comes standard.”
